This report contains preliminary data on persons testing positive for COVID-19. It may be revised as new information is gathered during case investigation. The health department plans to update this data report weekly each Tuesday. A similar report is prepared and released for Barry County, MI each Monday.

The active case rate per 100,000 residents has risen again beginning on 9/4 and 9/5.

The current 7-day average of new cases is 3.3.

The active case rate is 27.3 per 100,000 as of 9/15.

Active Cases = Total Cases – Deaths – Recovered Cases

For data on probable cases, visit Michigan’s COVID-19 Data Website, at https://www.michigan.gov/coronavirus/0,9753,7-406-98163_98173---00.html

Probable cases are defined as persons have a direct link to a positive case and exhibiting symptoms related to COVID-19.

The increase in probable cases seen in June is due to a change in methodology by the state to include positive antibody tests in the probable case counts.

Cases may be removed from the probable designation if they are tested and are either positive or negative.
