

Getting 'Back to Normal' Is Going to Take **All of Our Tools**

If we use **all the tools** we have, we stand the best chance of getting our families, communities, schools, and workplaces “back to normal” sooner:

Get Vaccinated.

Wear a mask over your nose and mouth.

*Stay 6ft. away from others
& avoid large crowds.*

Wash hands often.

Even people who get the vaccine should wear a mask indoors and get tested for COVID-19 3-5 days after exposure.

Vaccination works best to prevent **severe illness, hospitalization, and death**. Vaccinated people have some protection against getting COVID-19, but provide less protection against getting some variants, such as delta.

Vaccinated persons with an exposure to someone with suspected or confirmed COVID-19 are not required to quarantine if they meet all of the following criteria:

- Are fully vaccinated (i.e., ≥ 2 weeks following receipt of the second dose in a 2-dose series, or ≥ 2 weeks following receipt of one dose of a single-dose vaccine)
- Have remained asymptomatic since the current COVID-19 exposure

Vaccinated inpatients and residents in healthcare settings or people who live in group settings (like a correctional/detention facility or group home) should still stay away from others for 14 days & get tested.
